

## Directives suPHP ISPconfig3

Posted by dxv - 16 Nov 2011 15:25

---

When SuPHP is used regular apache2 directives are ignored. Directives have to be redirected to php.ini file.

To accomplish this use .htaccess file in vhost and use the redirect\* line in it

Or as in my case add the redirect\* line in ISPconfig2/3 apache directives.

Redirect\* line:

suPHP\_ConfigPath /home/websites/domain.tld/

To update this: ISPconfig3 is now updated so use custom php.ini or apache directives tabs to add custom lines with out any need of redirection 📌  
. So in this case my above suggestion is absolute.
